EDUCATION

York University

B.Eng. Software Engineering, Specialized Honours

Toronto, ON

Sep. 2022 – Aug. 2027

- **Coursework:** Compiler Construction, Operating Systems, Computer Architecture, Databases, Software Testing, Computer Networks

EXPERIENCE

Software Developer Co-op

Ontario Government, MPBSD

Sep. 2025 – Present

Toronto, ON

- Contributed across the full SDLC of the **CDIS Modernization** project, migrating legacy Java 1.8 modules to Angular and Spring Boot and shipping **40+ reusable UI components** adopted across 3 ministry programs.
- Reverse-engineered legacy service calls, SQL dependencies, and UI state before rewriting features into a cleaner front-end and facade-layer architecture.
- Built internal knowledge bases in Obsidian and Graphify from scattered business rules and API behavior, enabling faster **root-cause analysis** and **AI-assisted code generation**.

Software Developer Co-op

CIBC

Sep. 2024 – Dec. 2024

Toronto, ON

- Engineered an automated ETL pipeline using **Jenkins, Java, and SQL** to replace manual querying for 8 weekly Excel reports, cutting **15+ hours/week** of analyst workload for a 20+ person team.
- Engineered and rolled out name-change specifications across 3 legacy banking systems, hardening identity workflows for **11M+ retail clients**.
- Audited eCIF schema changes affecting consent, permissions, and access controls for **4,000+ staff**, feeding into 2 release risk reviews.

Developer / Automation Lead

Data Science Club @ York University

Oct. 2025 – Present

Toronto, ON

- Shipped a Next.js platform with Firebase Auth, Firestore, and Zod-validated APIs serving **80+ members** across registration, admin, and CMS workflows.

PROJECTS

TechYork Collaboration Platform | *Next.js, TypeScript, C#, ASP.NET Core, PostgreSQL, AWS*

[Live Link](#)

- Architected a full-stack platform for 30+ users with a Next.js frontend, C#/ASP.NET Core API layer, PostgreSQL schema design, and role-based admin flows.
- Led **6 developers** through issues, pull requests, CI checks, and code reviews; moved hosting from Railway to a Linux VPS on an AWS-ready deployment path.
- Built GitHub API ingestion, job scrapers, and matching logic processing **500+ data points/day** to power project recommendations and internal analytics.

Hermes Agent Deployment | *Linux, Python, Bash, Docker, Nginx, SSL/TLS, MCP*

[GitHub Link](#)

- Deployed an autonomous coding agent on a Linux VPS with Docker, cron, and Python/Bash tooling, running **20+ scheduled engineering tasks/day** unattended.
- Configured Nginx reverse proxy rules, SSL/TLS certificates, and MCP-based database access so the agent could securely read and write production data on its own.

REAI Real Estate Predictor | *Python, XGBoost, Optuna, Flask, Docker, AWS, Railway*

[Live Link](#)

- Trained an XGBoost model with Optuna tuning on 50K+ Canadian listings, reaching **$R^2=0.91$** for price prediction across regional housing features.
- Built a Dockerized Flask inference API with rate-limited endpoints, Railway deployment, and AWS App Runner/Lambda-ready configuration for model serving.

TECHNICAL SKILLS

Languages: Java, Python, TypeScript, JavaScript, C#, C++, C, SQL, Bash, PowerShell, HTML/CSS

Backend/Systems: Spring Boot, ASP.NET Core, Flask, REST APIs, MVC, UML, Linux/UNIX, Windows, OAuth, SSL/TLS

Frontend/Data/Cloud: Angular, React, Next.js, PostgreSQL, MySQL, MongoDB, Firestore, AWS EC2, AWS Lambda, AWS S3, GCP, Azure

DevOps/Testing: Docker, Jenkins, GitHub Actions, Git, Jira, Confluence, JUnit, Cypress, Playwright

AI/Automation: Codex, Obsidian, Graphify, VPS automation, Knowledge bases.
