EDUCATION

York University

B.Eng. Software Engineering (Specialized Honours)

Toronto, ON

Sep. 2022 – Aug. 2027

EXPERIENCE

Software Developer Co-op

Ontario Government (MPBSD)

Sep. 2025 – Present

Toronto, ON

- Built **Angular (TypeScript)** features and **Spring Boot** REST APIs, strengthening validation and reliability to sustain a **99.5%** API success rate across production endpoints.
- Implemented **Playwright** end-to-end automation, growing coverage to **~90%** and improving release confidence across frontend and backend changes.
- Applied **Oracle SQL** data-quality checks across **4–5** backend pipelines to validate production-impacting changes and reduce downstream defects.
- Authored reusable **AI-assisted developer workflows** and engineering documentation that accelerated onboarding and delivery.

Software Developer Co-op

CIBC

Sep. 2024 – Dec. 2024

Toronto, ON

- Automated SIC and trustee-code processing workflows, reducing processing time by **70%** and improving data accuracy across high-volume financial records.
- Built features for a **React (TypeScript)** and **Azure**-based notification platform, improving reliability and internal UX.
- Supported **5** production releases using **Jira** and **Confluence**, contributing to a **20%** reduction in post-release incidents.

LEADERSHIP

Developer / Automation Lead (Volunteer)

Data Science Club @ York University

Jan. 2025 – Present

Toronto, ON

- Built and launched a club platform using **Next.js**, **Firebase**, and **Zod**-validated APIs to support secure member and admin workflows.
- Integrated cloud **AI services** and automation into the platform to support events, demos, and technical workshops.

PROJECTS

TechYork – University Collaboration Platform | *Next.js, TypeScript, C#, ASP.NET Core, PostgreSQL* | [Live](#)2025

- Built a full-stack collaboration platform for York University students focused on networking, project matching, academic discovery, and realtime engagement.
- Led architecture and end-to-end implementation across web, authentication, data, API, and realtime systems.

CodeEcon – AI Coding Agent Visualizer | *TypeScript, VS Code Extension, Codex, Graphify* | [Source Code](#) 2026

- Built a **VS Code extension** that visualizes AI coding agents as live pixel characters, making agent activity, permissions, and task flow easier to inspect.
- Integrated a **Codex-first** workflow with **Graphify** repo memory and **Serena** fallback context to improve structural repo awareness in multi-agent development.

REAI – Real Estate Price Predictor | *Python, XGBoost, Docker, GCP Cloud Run* | [Live Demo](#) 2025

- Trained an **XGBoost** regression model with Bayesian hyperparameter optimization (**Optuna**) to predict Canadian home prices from large-scale structured data.
- Deployed the inference pipeline using **Docker** and **GCP Cloud Run** with validation, rate limiting, and monitoring.

TECHNICAL SKILLS

Languages: Python, Java, TypeScript, C#, SQL, HTML/CSS **Frameworks:** Next.js, Angular, React, Spring Boot, Node.js, Express, Flask, FastAPI

AI / Data: Pandas, PySpark, XGBoost, Optuna, PyTorch, RAG, AI agents, workflow automation **Cloud / DevOps /**

Testing: GCP, Azure DevOps, AWS, Docker, Firebase, Git, CircleCI, Playwright, Selenium, JUnit
